

A Tour of the aTouchAway app (Aetonic Tablet)

This article will show you what the app looks like and how to navigate each of the sections. This is the Aetonic tablet version of the app.

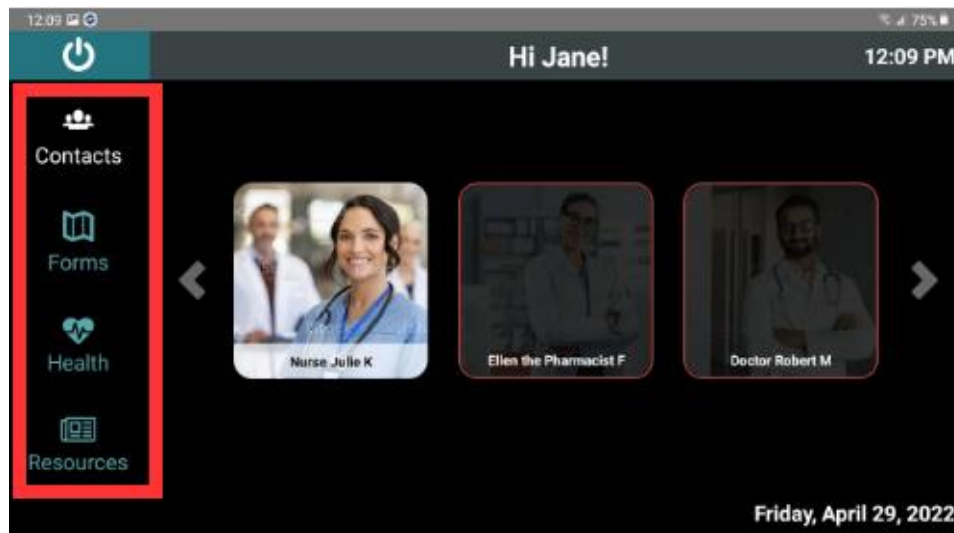

When you turn on your tablet, the aTouchAway app will automatically load and open. Your screen will look similar to this, but there may be some differences depending on your program.

If you have any questions, **contact your program coordinator or health care provider.**

What you see on the screen

On the left-hand side of the screen is the navigation menu. Tap the items on this menu to get to that section of your app.

Contacts

- Contacts will show you the members of your care team.
- Their pictures will appear in boxes on your screen. You should also see their name on their picture.
- **Tapping their picture will call them.**
- Tapping the arrows on either side of the picture will allow you to see other contacts if you have more than what fits on your screen.

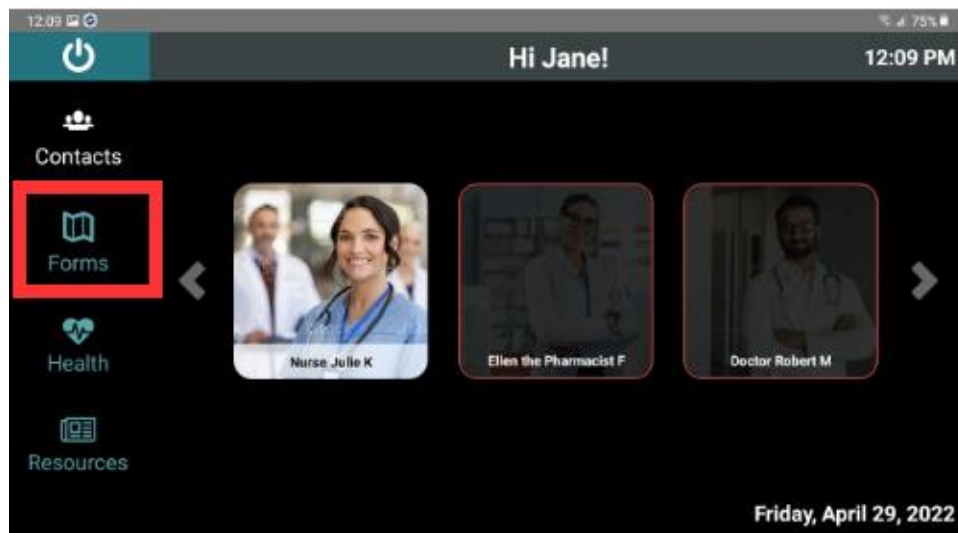

You can only call your contacts if they are online. When they are online, their picture will appear bright and clear. A greyed-out image (Ellen the Pharmacist and Doctor Robert M) means they are offline and not available.

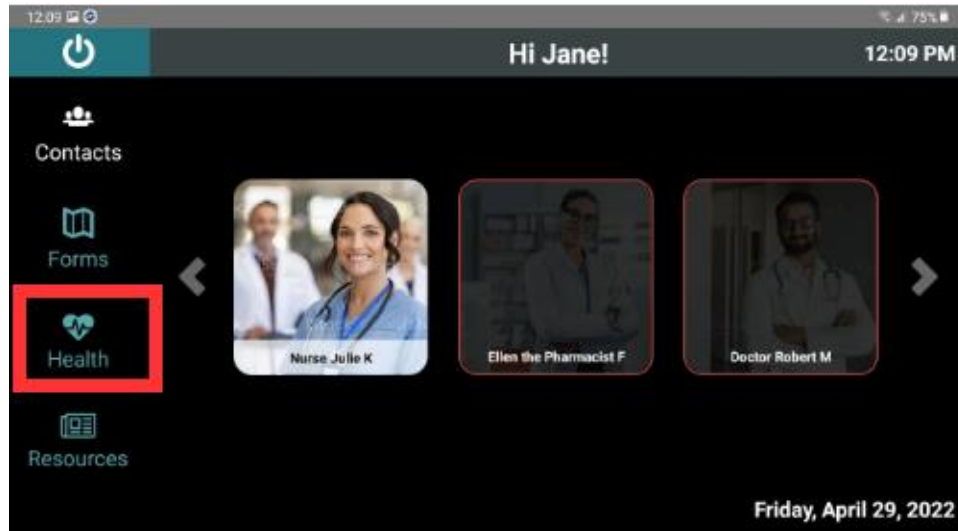

Forms

Your healthcare provider may have some forms for you to fill out. They will be found in this section.

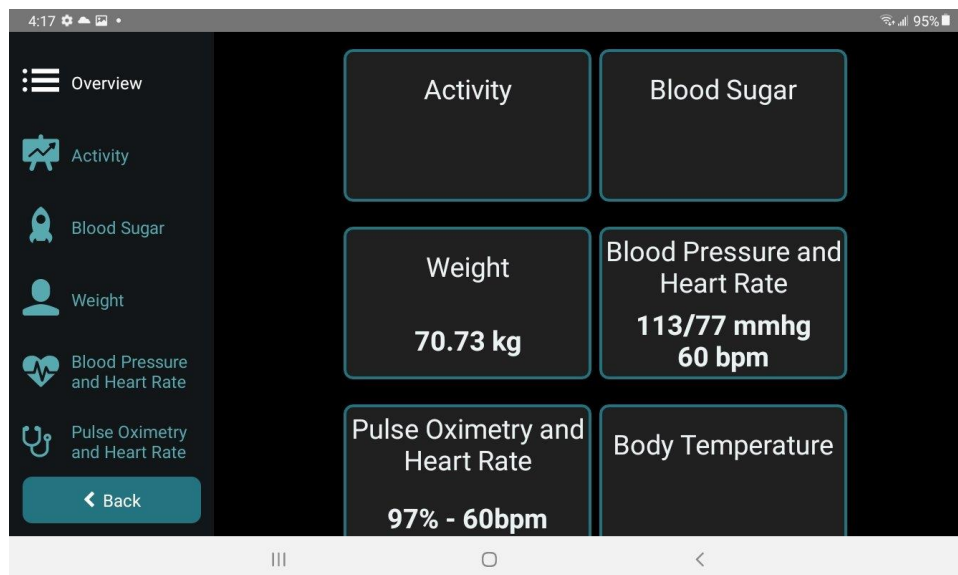

Health

Health will allow you to take your vital signs and view your last reading. Tap this button to get to the next screen.

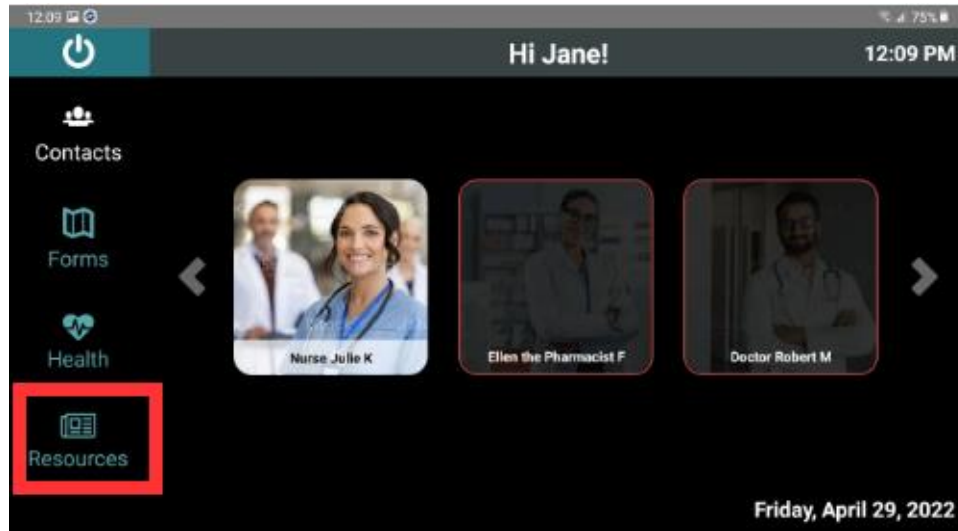

The Health screen will be customized based on your care plan and the vital sign readings your health care provider needs to see. You may see different buttons than what is pictured here.

To return to the main page, tap the **Back** button (on the left, at the bottom).

Resources

This section of the app will contain reading materials and information provided by your health care provider. Tap the **Resources** button to access this page.

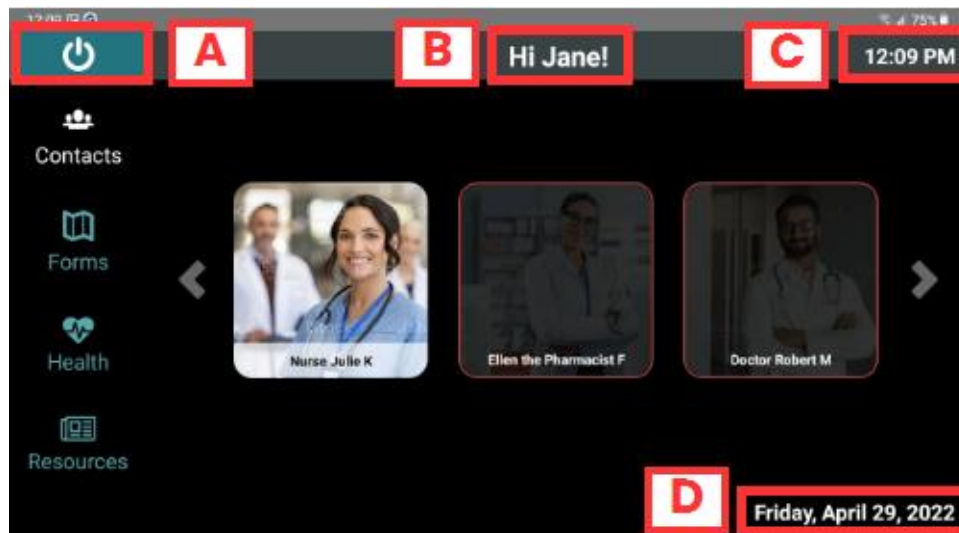

Tap the resource title in the list to view it.

Tapping the **Back** button will bring you back to the main screen.

Other buttons and information on the main page:

A - Power: The **Power** button does not turn off your tablet. It will turn the app screen OFF. You must tap the button again for the app to reappear on the screen. You will hear alerts when you need to respond to the app, but you won't see anything on the screen until you turn the app power back ON. We recommend leaving the screen ON and letting the app "sleep".

This button might not appear on your screen, depending on your settings.

You can use the Power Button to turn off your screen for privacy but remember to turn it back on again so that you can see any alerts or actions that you might have.

B - Name: Your name should appear here.

C - Clock: The clock in the top right corner will show the current time where you are located.

D - Date: Today's date will appear in the bottom right corner.
