

How to Use the Fora IR20 Thermometer with aTouchAway to Check Your Temperature

Step-by-step instructions to check your temperature using the FORA IR20 thermometer connected to the aTouchAway app.

Your Fora IR20 thermometer should have already been paired to your tablet by your healthcare provider. These instructions will show you how to respond to the tablet when you receive instructions to check your temperature.

You have the option to manually enter your temperature or to have the app read the results directly from your device. We recommend reading directly from the device.

This screen will show on your tablet.

To Check your Temperature

To take your temperature, you will need to attach a clean probe cover to the thermometer. If the probe cover is not firmly in place, the thermometer will not work.

Turn the thermometer **ON** by pressing the button on the front of the thermometer below the LCD screen.

Place the temperature probe (with the cover) into your ear canal. **Press** and **hold** the button on the back of the thermometer until you hear a beep. You should see the temperature reading on the LCD screen.

Tap the **Ok** button on this screen in your app:

12:17 🖬 👄 💠					🗟 🗐 75% 着
S.	Prepare to read	from device			
Сî. И	Turn device on by clicking the button on the front. Gently place the probe in your ear canal. Press and hold the button on the back until you hear a beep. When you see the blue light at the bottom flashing, tap Ok. Your reading will be displayed in the 'Today' square				
(Ĉ)				Cancel Ok	
181	Sodium (NA)		Read from device		
	< Back				
	111	0		<	

You should see the device connect to the tablet.

The temperature reading should appear in the app following this connection.

If the device fails to connect, you may choose to enter your temperature manually. Tap **Here** above the **Done** button to return to the main screen. Select **Manual entry** and enter your temperature results as they appear on your thermometer.
