

Interacting with the aTouchAway app

Your app is customized to the care plan that your health care provider has created for you. You will receive specific instructions and information from your health care provider. This is a general overview of how to interact with the app.

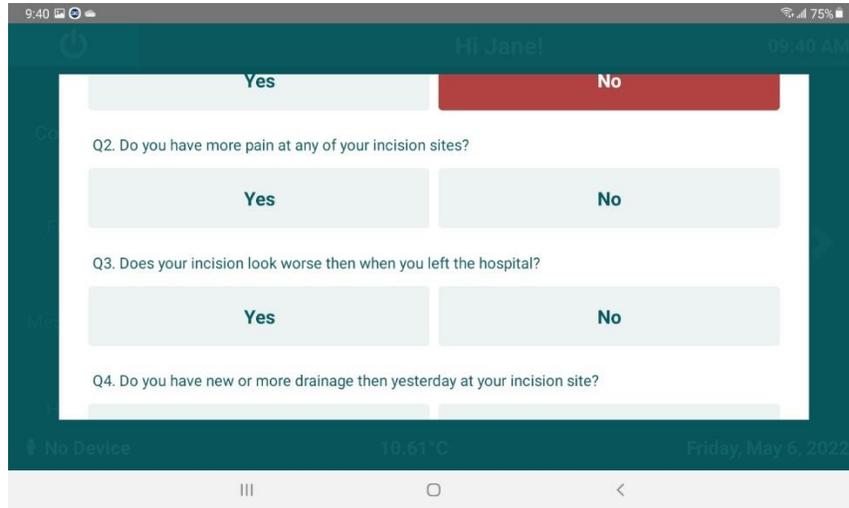

Each care plan will have different interaction scenarios, depending on your health care needs. These are some examples that you might see.

Questionnaires

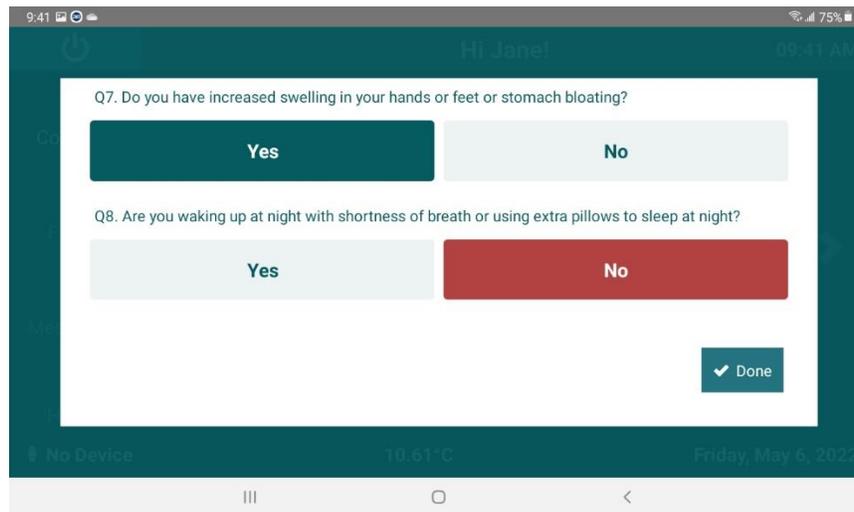

Tap the screen to choose the answer to the question.

Questionnaires may be longer than the screen. You can scroll through by touching the screen and sliding your finger to move the screen up or down.

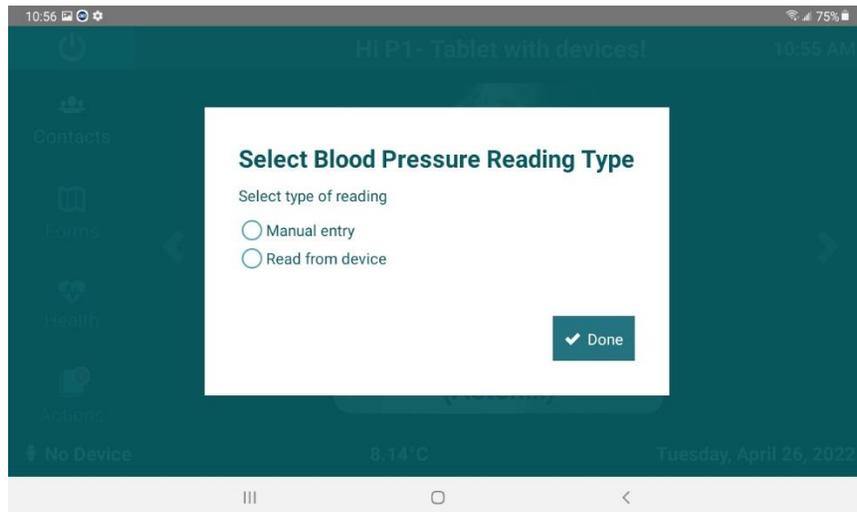

Be sure to scroll all the way down until you can tap the **Done** button.

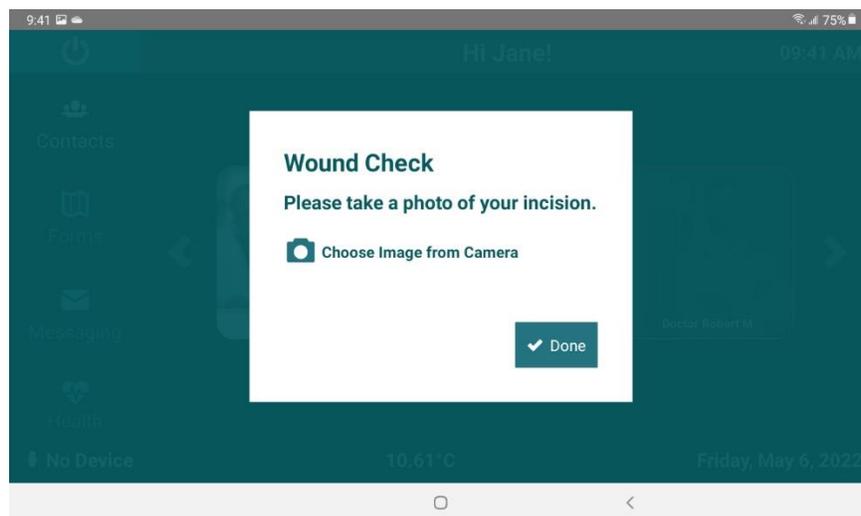

Vital Signs

You may be asked to provide vital signs. For more information on how to take your vital signs, check out the support articles available at <https://info.aetonix.com>

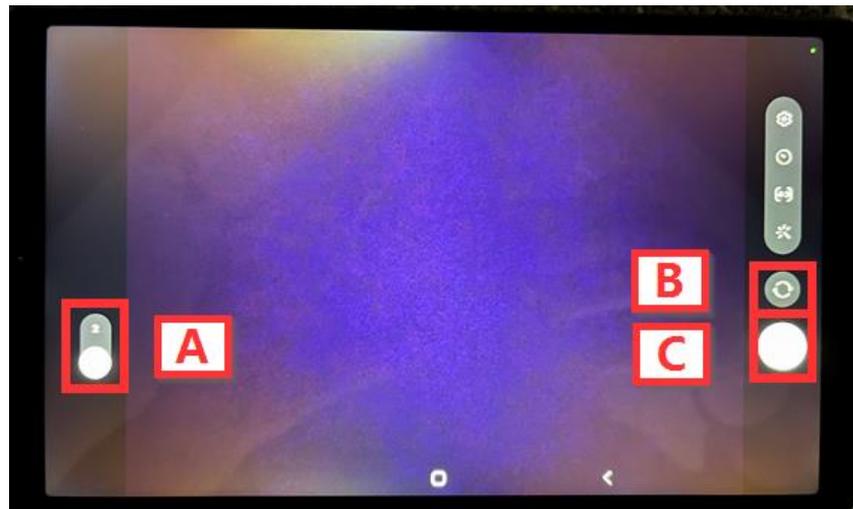

Submit a Photo

You may be required to take a photo using the tablet. If prompted, touch the camera image in the box to open the camera.

There are 3 buttons on the camera app that you may choose to use.

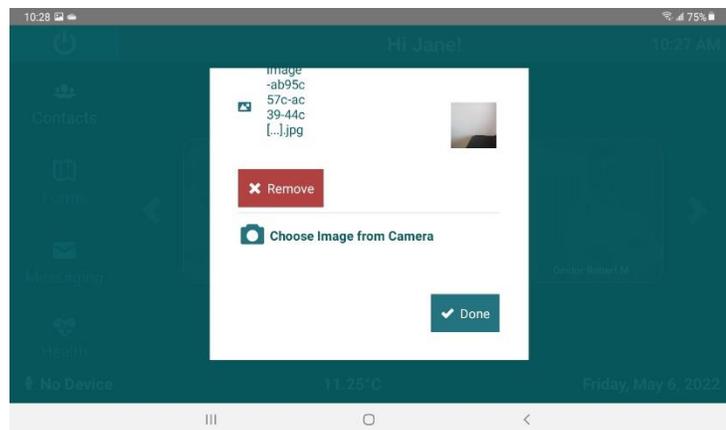

A - Zoom: You can choose to leave the zoom at neutral (x1) or zoom the image (x2) by sliding the small white circle up or down.

B - Choose the Camera View: You can choose to take a photo from the camera on the back of the tablet or on the front of the tablet by tapping this button.

C - Shutter: Touch the round white button to take a photo. You will have the option to retry if the picture is not to your liking. Try to take a picture that isn't blurry.

Once the picture is acceptable, you will need to submit it by touching the **Done** button on your screen. You will see the image that you've taken and can choose to remove it if you would like to try again.

If you have any questions about your health or about your care plan, please contact your health care provider.
